**Comments or suggestions for any of the faculty.**

- This session was the most fulfilling for me of all the sessions I attended during the entire forum. Sarah is a gift to the improvement community.
- appreciated her practical suggestions & positive support
- This really opened my eyes as to how things could be done differently with the new technologies.
- Great ideas, some of which I am not ready for!
- Speaker had heavy accent which made it a challenge to understand all of the material. Overall, very good.
- The audience was large, the room was narrow and less than ideal for an interactive presentation.
- i enjoyed this session tremendously, and have set up a Wiki for our senior management team to use for an important collaborative project
- I had difficulting understanding her. She was not very clear about explaining the technology.
- Absolutely fabulous. I learned about some great ways to stay in touch with teams and our medical staff. I can't wait to try some of the methods she discussed.
- Could use real time examples as opposed to just screen prints
- Excited to learn more.
- I loved this quick tour of what is out there that I may not have seen before. Just as informative as some of the heavier content sessions. A refreshing change from some of the sessions that require me to think a lot.
- Sarah was very passionate and energetic. I wish I could have seen her more clearly but it was difficult to see her in a sea of people....perhaps a stage would have helped.
- I have attended Sarah's sessions over several years and always come away with useful, practical help delivered with style, humor and a sense of fun.
- Very difficult to hear. Slides were hard to view even on my laptop.

- Great exposure for web applications I did not know even existed!!
- Very timely topic.
- Wished it would have been longer and would have had more time/opportunity to test out some of the software links that were provided.
- outstanding
- The best learning session I attended. Clear, concise, with a lot of practical information to get the uninformed started.
- a real eye opener
- room acoustics were bad and couldn't hear her well
- This was, by far, the best breakout session I attended this conference. I'm not a "geeky" person - so I was a little concerned that I would be able to follow it. But Sarah's explanation of several tools was engaging and encouraging to give them a try. Definitely repeat this session at future forums!
- Please keep accepting her applications for presentations and if she doesn't apply one year, go after her to get something in!

- please use microphone, was difficult to hear everything being presented from the back of the room
- This was not what I was expecting to hear about, but it was enlightening when realizing this is the means of educating large scale today and into the future.
- I will be setting up a department website at the first of the year. There are a few things I want to set up in which it is more interactive with staff. She gave me some excellent ideas to look at.
- This was my favorite session of the conference and made the whole trip worthwhile. I was exposed to great stuff! Now I am back trying to figure out how to actually use it, which might be a challenge, but at least I know it exists! Great speaker, great content, great delivery. Thanks!
- Content was billed as "geeky" but was very low level. Should be advertised for those unfamiliar with the internet.

- very informative. I considered myself computer wise, but I had no idea of some of these websites. Thank you plawson@dh.org
- Excellent class. This should be a Mini-course as there wasn't enough time. There was much more she could have demonstrated but due to time constraints was unable to.
